Ultra Low Flow AQUAMIST Nozzles
Type ULF AM30
Automatic (Closed)

General Description
TYCO Ultra Low Flow AQUAMIST Nozzles Type ULF AM30 are closed (automatic) nozzles intended for use with engineered, water-mist systems. They are low-pressure nozzles that utilize a single fluid jet impinging on a diffuser to produce a spray having a range of water droplet sizes suitable for the control of Class A fires and the protection of data centers.

It is recommended that the end user be consulted with respect to the suitability of the materials of construction for any given corrosive environment. The effects of ambient temperature, concentration of chemicals, and gas/chemical velocity should be considered, at a minimum, along with the corrosive nature to which the nozzles may be exposed.

NOTICE
The TYCO Ultra Low Flow AQUAMIST Nozzles Type ULF AM30 described herein must be installed and maintained in compliance with this document and with the applicable standards of the NATIONAL FIRE PROTECTION ASSOCIATION (NFPA), in addition to the standards of any authorities having jurisdiction. Failure to do so may impair the performance of these devices.

The design of individual water mist systems can vary considerably, depending on the characteristics and nature of the hazard and the basic purpose of the water mist system. Because of these variations, the design of water mist systems for fire protection must only be performed by experienced designers who thoroughly understand the limitations as well as capabilities of such systems.

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. Contact the installing contractor or product manufacturer with any questions.

Approvals
The TYCO Type ULF AM30 AQUAMIST Nozzles in a 57°C (135°F) temperature rating and in a natural brass finish is VdS approved when used as part of an engineered wet pipe low pressure system. Testing was performed in accordance with VdS Test Protocol, “Fire tests for false floors and false ceilings as a completion of the fire tests “Office, OH1”, and similar,” dated December 6, 2007.

The TYCO Type ULF AM30 AQUAMIST Nozzles in a 57°C (135°F) or 68°C (155°F) temperature rating and in a natural brass finish are FM Approved for the protection of data processing equipment rooms/halls in either wet pipe or single-interlock preaction configurations. Testing for the single-interlock preaction data center application was conducted in accordance with FM Approvals S560 “Approval Standard for Water Mist Systems.”

Technical Data
Discharge Coefficient
\[ K = 8.5 \text{ lpm/bar}^{1/2} \ (K=0.59 \text{ gpm/psi}^{1/2}) \]
Thread Connection
1/2 Inch NPT
Finish
Natural Brass

Table A

Physical Characteristics
- Frame: Stainless Steel
- Strainer: Copper
- Orifice Insert: Stainless Steel
- Button: Stainless Steel
- Ejection Spring: Stainless Steel
- Bulb: Stainless Steel
- Diffuser: Stainless Steel
- Loading Screw: Stainless Steel

The smallest waterway (orifice) diameter of the Orifice Insert is nominally 4.4 mm (0.172 in.). The diameter of the Inlet Strainer perforations is nominally 3.2 mm (0.125 in.).

Design Criteria
Obtain guidance for the design of a water mist system that utilizes the TYCO Ultra Low Flow AQUAMIST Nozzles Type ULF AM30 from the Technical Services department.
Installation

TYCO Ultra Low Flow AQUAMIST Nozzles Type ULF AM30 must be installed in accordance with this section.

Do not install any bulb type nozzle if the bulb is cracked or there is a loss of liquid from the bulb. With the nozzle held horizontally, a small air bubble should be present. The diameter of the air bubble is approximately 1,6 mm (1/16 in.) for the 57°C (135°F) to 2,4 mm (3/32 in.) for the 182°C (360°F) temperature ratings.

A leak-tight 1/2 inch NPT nozzle joint should be obtained by applying a minimum-to-maximum torque of 9,5 to 19,0 Nm (7 to 14 lb-ft). Higher levels of torque can distort the nozzle inlet and cause leakage or impairment of the nozzle.

Type ULF AM30

The Type ULF AM30 AQUAMIST Nozzles must be installed in accordance with the following instructions:

Step 1. Install the Type ULF AM30 in the upright position as shown in Figure 1.

Step 2. With pipe thread sealant applied to the pipe threads, hand-tighten the nozzle into the nozzle fitting.

Step 3. Tighten the nozzle into the nozzle fitting using only the W-Type 6 Wrench (Ref. to Figure 2). With reference to Figure 1, apply the W-Type 6 Wrench to the wrench flats.

Care and Maintenance

TYCO Ultra Low Flow AQUAMIST Nozzles Type ULF AM30 must be maintained and serviced in accordance with this section.

Before closing a fire protection system main control valve for maintenance work on the fire protection system that it controls, obtain permission to shut down the affected fire protection system from the proper authorities and notify all personnel who may be affected by this action.

Nozzles which are found to be leaking or exhibiting visible signs of corrosion must be replaced.

Automatic nozzles must never be painted, plated, coated, or otherwise altered after leaving the factory. Modified nozzles must be replaced. Nozzles that have been exposed to corrosive products of combustion, but have not operated, should be replaced if they cannot be completely cleaned by wiping the nozzle with a cloth or by brushing it with a soft bristle brush.

Care must be exercised to avoid damage to the nozzles before, during, and after installation. Nozzles damaged by dropping, striking, wrench twist/slippage, or the like, must be replaced. Also, replace any nozzle that has a cracked bulb or that has lost liquid from its bulb (Ref. Installation section).

Limited Warranty

Ordering Procedure

Contact your local distributor for availability. When placing an order, indicate the full product name and part number (P/N).

Type ULF AM30 AQUAMIST Nozzles Specify: Type ULF AM30 AQUAMIST Nozzle with Natural Brass finish, (specify) temperature rating, P/N (specify):

- 57°C (135°F) ........................................ 49-230-1-135
- 68°C (155°F) ........................................ 49-230-1-155
- 79°C (175°F) ........................................ 49-230-1-175
- 93°C (200°F) ........................................ 49-230-1-200
- 141°C (286°F) ........................................ 49-230-1-286
- 182°C (360°F) ........................................ 49-230-1-360

Wrench Specify: W-Type 6 Sprinkler Wrench, P/N 56-000-6-387
